Our Mission

To deliver high-quality residential, commercial, industrial, and community construction projects, driven by a team of skilled and motivated craftsmen.

Our Vision

To become Ghana’s leading force in construction by building sustainable spaces that empower people and drive economic growth and development.

INTRODUCTION

Company Background

Grandeza Construction Limited incorporated in Ghana as a limited liability company in 2023undertakes Building and Civil Engineering works. Our main aim is not only to build but to inspire and empower people to foster national development.

Our Engineers and Project Management team are of sound professional standing and have the capabilities to manage projects from inception, design, construction and commissioning.

POLICY STATEMENT

Grandeza Construction Ltd is committed to building efficiently, on schedule, and in full compliance with contractual, statutory, and safety standards while ensuring effectiveness, safety, and cost-conscious execution.

To uphold this policy, the Director of Projects has been designated as the Safety Quality Manager (SQM), responsible for overseeing the implementation, maintenance, and effectiveness of the Company Project Management System (CPMS) and reporting directly to the Board.

A dedicated Safety Quality Group convenes regularly to assess the CPMS, ensuring its continued effectiveness while identifying and recommending improvements where necessary.

Furthermore, every employee is expected to operate within the CPMS framework, adhere to established procedures, and take personal accountability for the quality of their work.

GENERAL INFORMATION

1.	Company Name:	**Grandeza Construction Limited**
2.	Head Office Address:	**AZ 317 Nuumo Larweh Street Spintex, Accra.**
3.	Country & Year Incorporated:	**Grandeza Constrction Limited Registered 2023 in Accra, Ghana Registrar General Certificate No. CS063270889 Works and Housing Certificate No. 73089 A Labour Clearance Certificate No. 0158673**
4.	Main Lines of Business:	• **General Building and Civil Engineering** • **Management Contracting** • **Property Development**
5.	Storage Facility and Workshops:	**The main yard of the company is situated on a two (2) acre plot with the following facilities:** **a) Steel Cutting and Bending Shop:** This shop is equipped with a steel cutting and steel bending machines capable of cutting and bending between 5 to 10 tons of reinforcement a day. This enables us to cut and bend reinforcement to schedule off site and fix only on site.

b) Joinery Workshop:
This shop is equipped adequately to enable the company produce every joinery and carpentry item. It is equipped with joinery machines and a lot of hand tools i.e. Sanding Machines, Hand Drills, Mitre Machine etc.

c) Carpentry Shed:
We have five (5) benches to accommodate about twenty (15) carpenters capable of fabricating all carpentry requirements for the project.

d) Steel/Welding Shop
This shop is equipped with a Welding Machine, Steel Cutting,
Drilling Machine etc. which enables the fabrication of steel
trusses, gates and burglar proof off site.

e) Central Stores:
This is made of a storage stores and a sheds for storing items in large quantities:

- **Reinforcement**
- **Timber**
- **Cement**
- **Tiles**
- **PVC Pipes**
- **Paint**

MANAGEMENT TEAM

GRANDEZA HEALTH & SAFETY POLICY

GRANDEZA SAFE SYSTEMS OF WORK

INTRODUCTION

A significant number of serious accidents occur in the construction industry and these are due to particular problems associated with the activities of construction personnel. Some of the identified problems are:

- **High Personnel Turnover Rate**
- **Inadequate Training**
- **Unfamiliar Environment**
- **Poor Communication**

The Company policy guidelines on health and safety i.e. Grandeza Safe Systems of Work states that all employees including management conduct their activities in such a way as to take foremost account of the health and safety of the individual and other persons.

In following the policy, the Project Managers and Site Agents should use their best endeavours to ensure that employee working under their instruction apply LESASYWO standards fully.

GRANDEZA SAFE SYSTEMS OF WORK

A quarter of all fatal accidents at work involves failures in systems of work. Many hazards are clearly recognisable and can be overcome by physically separating people from them.

WHAT IS A SAFE SYSTEM

A safe system of work is a formal procedure which results from systematic examination of a task in order to identify all the hazards. It defines safe methods to ensure that hazards are eliminated or risks minimised.

WHEN IS A SAFE SYSTEM NEEDED

Many hazards are clearly recognisable and can be overcome by physically separating people from them, e.g. by using guarding on machinery.

- Cleaning and maintenance operations
- Making changes to work layout, materials used or working methods
- Employees working away from base or working alone
- Breakdowns and emergencies
- Controlling activities of contractors on your premises
- Loading, unloading and movement of vehicles

A safe system of work is needed when hazards cannot be physically eliminated and some risk remains. You should apply these principles to routine work as well as to more special cases such as:

FIVE STEPS TO A SAFE SYSTEM OF WORK

- Assess the task
- Identify the hazards
- Define safe methods
- Implement the System
- Monitor the Systems

IDENTIFYING THE HAZARDS

When you have assessed a task, you should spot its hazards and weigh up the risks. Where possible you should eliminate the hazards and reduce the risk before you rely upon a safe system of work.

DEFINING SAFE METHODS

Your safe system of work may be defined orally, by a simple written procedure or in exceptional cases by a formal permit to work scheme.

- Consider the preparation and authorisation needed at the start of the job.
- Ensure clear planning of job sequences
- Specify safe work methods
- Include means of access and escape if relevant
- Consider the task of dismantling, disposal etc at the end of the job.

Involve the people who will be doing the work. Their practical knowledge of problems can help avoid unusual risk and prevent false assumptions being made at this stage.

In those special cases where a permit to work system is needed, there should be a properly documented procedure. It is important that everyone understands which jobs need a formal permit to work. Permit to work should:

(a) Define the work to be done;
(b) Say how to make the work area safe;
(c) Identify any remaining hazards and precautions to be taken;
(d) Describe checks to be carried out before normal work can be resumed; and
(e) Name the person responsible for controlling the job.

JOBS LIKELY TO NEED A PERMIT TO WORK SYSTEM INCLUDE:

- Working in confined spaces
- Hot work on plant containing flammable dust, liquids, gases or residues of these
- Cutting into pipework containing hazardous substances
- Work on electrical equipment

Your safe system of work must be communicated properly, understood by employees and applied correctly. They should be aware of your commitment to reduce accidents by using safe systems of work.

Ensure that supervisors know that they should implement and maintain those systems of work and that employees, supervisors and managers are all trained in the necessary skills and are fully aware of potential risk and the precautions they need to adopt.

Stress the need to avoid short cuts. It should be part of a system of work when faced with an unexpected problem until a safe solution can be found.

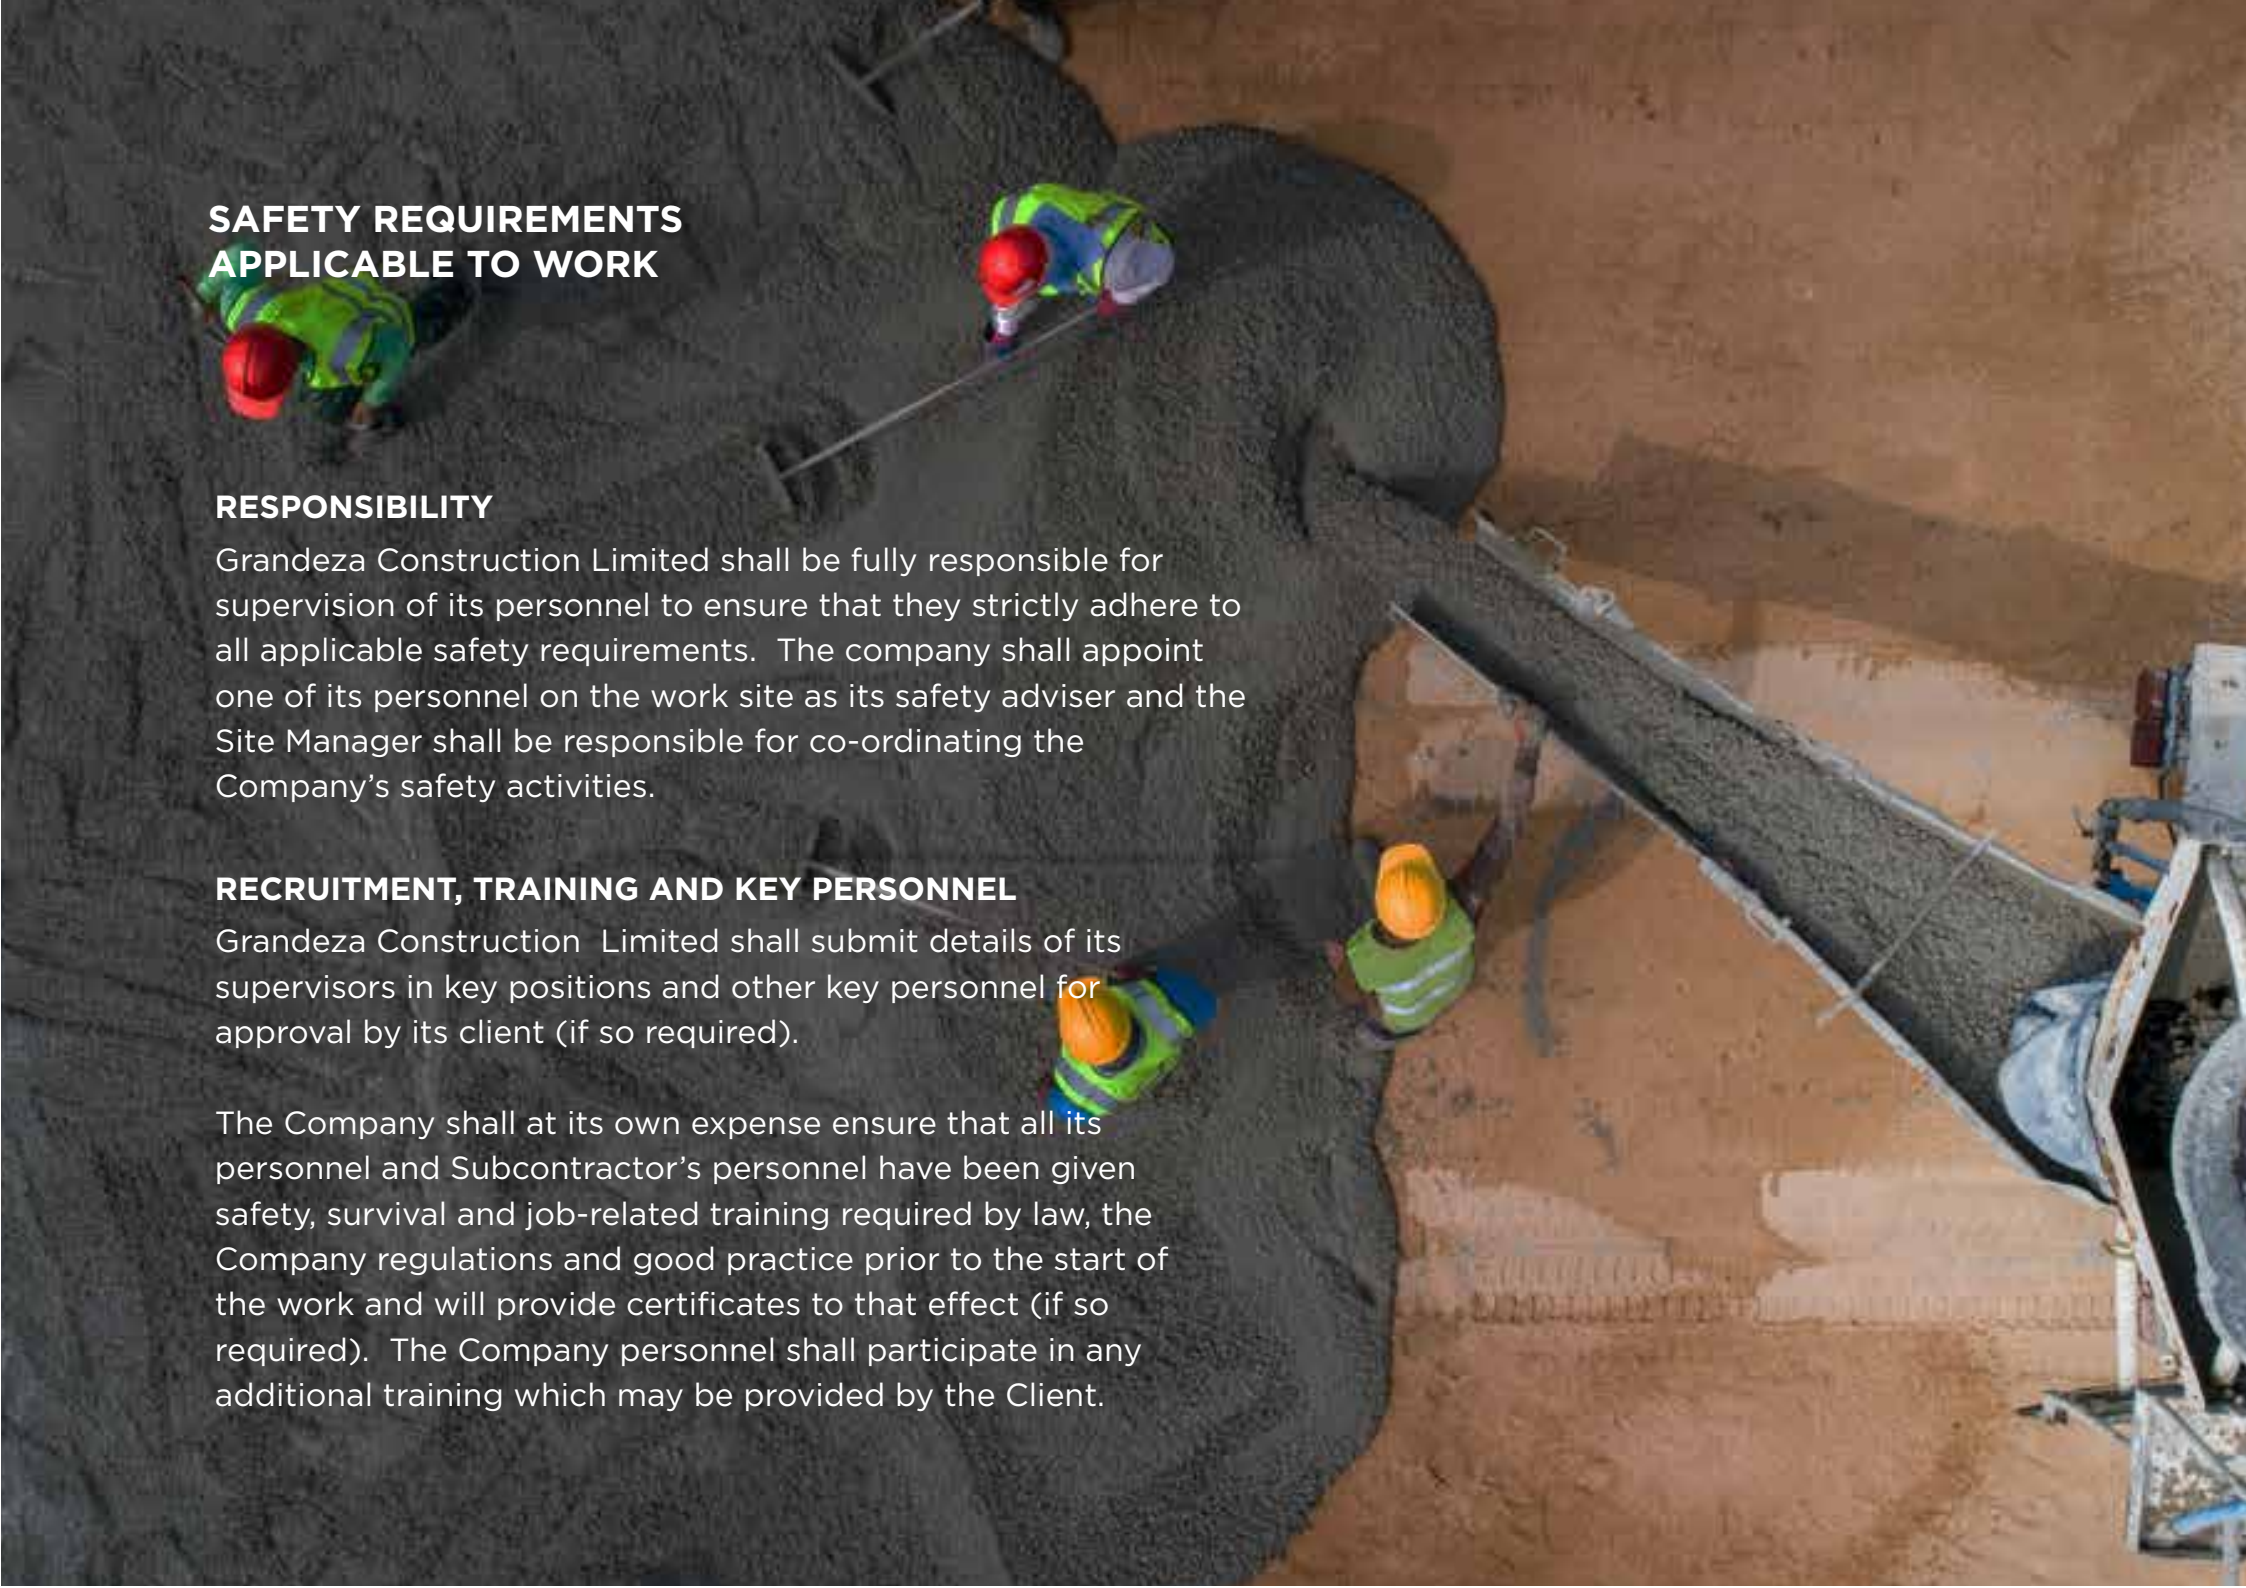
MONITORING THE SYSTEM

Monitoring means periodically checking:

- That employees continue to find the system workable;

- That the procedures laid down in your system of work are being carried out and are effective; and

- That any changes in circumstances that require alterations to the system of work are taken into account.



SAFETY REQUIREMENTS APPLICABLE TO WORK

RESPONSIBILITY

Grandeza Construction Limited shall be fully responsible for supervision of its personnel to ensure that they strictly adhere to all applicable safety requirements. The company shall appoint one of its personnel on the work site as its safety adviser and the Site Manager shall be responsible for co-ordinating the Company's safety activities.

RECRUITMENT, TRAINING AND KEY PERSONNEL

Grandeza Construction Limited shall submit details of its supervisors in key positions and other key personnel for approval by its client (if so required).

The Company shall at its own expense ensure that all its personnel and Subcontractor's personnel have been given safety, survival and job-related training required by law, the Company regulations and good practice prior to the start of the work and will provide certificates to that effect (if so required). The Company personnel shall participate in any additional training which may be provided by the Client.

SAFETY MEETINGS

Grandeza Construction Limited shall be responsible for maintaining and enhancing the safety awareness of its personnel and Subcontractor's personnel, including arranging safety meeting and participating as appropriate in safety meetings held by the client or other contractors.

The Company shall inform the Client representative of the time and place of safety meetings arranged.

Copies of minutes of the Contractor's safety meetings shall be sent to the Client. The Company personnel and subcontractor's personnel are to be encouraged to contribute actively to safety meetings and to identify safety topics for inclusion in the agenda for a safety meeting.

REPORTING OF ACCIDENTS

Grandeza Construction Limited shall have an accident report system and shall immediately notify the Client of all accidents resulting in:

- Fatalities and other lost-time injuries to its personnel and Subcontractors personnel
- Comparable injury to third party
- Damage to plant and equipment
- Loss of containment
- Actual or potential damage to environment
- An outbreak of fire

Immediate notification shall be followed by a full written report within 24 hours and statistics on accidents will be kept.

OCCUPATIONAL HEALTH AND HYGIENE

Grandeza Construction Limited shall be responsible for the medical welfare of its own Subcontractor's personnel and shall provide for:

- Facilities for administering first aid
- Periodic medical examinations
- Arrangements for professional medical treatment
- Hospitalisation

The Company shall ensure that all its personnel and Subcontractor's personnel are medically fit to perform their work and shall ensure that its personnel and Subcontractor's personnel shall maintain the highest standards of hygiene.

ENVIRONMENT

Grandeza Construction Limited shall pay due regard to the environment by preserving air, water, soil, animal and plant life from adverse effects of the our activities and minimising any nuisance which may arise from such operations.

ALCOHOL AND DRUGS

Grandeza Construction Limited shall ensure that at any time during performance of the work its personnel are neither under the influence of nor partake of any alcoholic liquor, drug or any other intoxicating substance, other than for bona fide medical reasons or other proper reasons which must be approved.

SAFETY EQUIPMENT AND PERSONAL PROTECTIVE EQUIPMENT

Grandeza Construction Limited shall provide adequate first aid equipment, fire extinguishers and other safety equipment of an approved type and amount, as may be specified or expected in accordance with good working practice and shall maintain this equipment in a professional manner as dictated by legal and industry standards.

There shall be free access by all persons on site to all fire extinguishers and safety equipment shall be maintained at all times.

The Company shall supply its personnel and Subcontractor's personnel with adequate protective clothing and equipment in connection with the safe performance of work. The personnel protective clothing and other protective equipment shall be maintained in good condition and be worn on all relevant occasions as directed by notices, work permits, safety regulations and good practice.
